

CM804F

CAR COATING TESTER

- With integrated probe, for easy and fast checking the condition of car body
- Measuring the thickness of varnish layer on iron body with 6-level range indication
- Auto power on and off, ready to work without any preparation, no damage to the coating surface
- Waterproof housing enables work even during rain
- Ideal for checking whether the car was painted for the second time or the body was repaired after crash
- Makes possible finding places where filler was laid and how thick it was done
- Checks whether the repairs were made in a correct way or the rough places were just filled

Technical specifications
